

## ABSTRACT

An optical recording medium in which deposition of impurities or damage to a surface of the medium illuminated by the light for signal recording and/or reproduction is to be prevented from occurring. An amine salt compound of perfluoropolyether having terminal carboxylic groups, represented by the chemical formulas (1) and/or (2):

...(formula 1)

... (formula 2)

where  $R_f$  denotes a perfluoropolyether group and  $R_1$ ,  $R_2$  and  $R_3$  denote hydrogen or a hydrocarbon group, is held on the surface side illuminated by light.
